# Introduction

The Marketing Department of Gelos Enterprises (Gelos) has requested the development of a web-based system to manage departmental tasks. Currently, tasks are tracked using spreadsheets, which has become inefficient and difficult to maintain.

The new website aims to improve task management, enhance productivity and provide a more user-friendly interface.

## Objectives

The task manager system has the following objectives:

- Replace the existing spreadsheet-based process with a web-based solution.
- Allow staff to easily create, view, update and delete tasks.
- Improve visibility of task progress and deadlines.
- Provide a solution that can be scaled for use by other departments within Gelos.

## Requirements

The task manager system has the following requirements.

### Functional requirements

The website must include the following core functions:

- **Add new task:** Users can create tasks (via a form) with a task name, due date, priority level (low, medium or high) and optional consultant (obtained from a provided list of Gelos staff members).
- **Display tasks:** Tasks should be shown in a clear list or table, including name, due date, priority level and consultant. Each task should include controls to complete or delete it:
  - **Complete task:** Users can mark tasks as complete. When a task is completed, it should remain visible but displayed with strikethrough formatting.
  - **Delete task:** Users can remove tasks no longer needed.

- **Search tasks:** Users can look up tasks by task name to display results or 'Task not found'.

**Note:**

Search functions will work by entering the exact role (when adding tasks) or task name (when searching tasks). Improved search functionality will be added in future enhancements by Gelos.

Persistent state management (for example, saving tasks to a database) is not required.

## Design and user experience

The website must:

- follow the Gelos [Style Guide Company \(pdf\)](#) (fonts, colours, logos)
- be responsive across multiple device sizes (desktop, laptop, tablet and mobile) to ensure usability
- conform to at least level A of the Web Content Accessibility Guidelines (WCAG) 2
- use valid code that conforms to web standards.

Each page must include:

- a navigational menu of text links providing access to all pages
- a footer with links to the Gelos [Privacy Policy \(pdf\)](#) and [Internet Usage Policy \(pdf\)](#)
- the Gelos logo, which includes a link back to the home page.
